

CSCI 131 — Introduction to Programming in Python

Programming Assignment 3

Conditionals

This assignment use `if`, `else`, and `elif`.

There are no starter files this time. Open IDLE, choose **File** → **New File** for each program, and save it under the name given in the problem. Put your name in a comment on the first line of each file.

Problem 1 — Overtime

Write a program `overtime.py` which asks the user for a number of hours worked and an hourly rate, then prints the pay. Hours up to and including 40 are paid at the given rate. Any hours *beyond* 40 are paid at 1.5 times the rate.

Use `'int(input("Enter Hours: "))'` and `'float(input("Enter Rate: "))'` to get the hours and rate.

Your program should produce these answers:

Hours	Rate	Output
35	2.75	Pay: 96.25
40	10	Pay: 400.0
45	10	Pay: 475.0

Problem 2 — Postage

Write a program `postage.py` which asks the user for a package weight in ounces and prints the postage cost in cents, according to the table below.

Use `'float(input("Enter Weight: "))'` to get the package weight from the user.

Weight	Postage
1 ounce or less	75 cents
more than 1, up to 5	100 cents
more than 5, up to 15	150 cents
more than 15	250 cents

Your program should produce these answers:

Weight	Output
0.8	Postage: 75 cents
3.0	Postage: 100 cents
12.5	Postage: 150 cents
16.0	Postage: 250 cents

Submission

Submit both source files on Canvas by the end of the period. Put your name in a comment at the top of each file. If a classmate helped you, put their name in the comment as well.

If you are not finished when the period ends, submit what you have. You may then complete it on your own and resubmit by Sunday, September 20 at 11:59 pm for up to 50% of the remaining credit.
