CSCI 131 — Introduction to Programming in Python
Programming Assignment 8
Sequences pt 2

There are no starter files. Open IDLE, choose **File** → **New File** for each program, and save it under the name given in the problem. Put your name in a comment on the first line of each file.

Problem 1 — Acronyms

An *acronym* is a word made from the first letter of each word in a phrase: *portable network graphics* is `PNG`. Write a program `acronym.py` which asks for a phrase and prints its acronym in capital letters. Use the prompt `'phrase = input('Phrase:  ')'`.

Split the phrase into words, collect the first letter of each word in a list, and use `join` to turn that list into the acronym.

Your program should produce these answers, for the given input:

Phrase	Output
`portable network graphics`	Acronym: PNG
`as soon as possible`	Acronym: ASAP
`self contained underwater breathing apparatus`	Acronym: SCUBA

Problem 2 — Grade Line

A gradebook stores each student on one line: the name, then the scores, with commas in between and no spaces. Write a program `grades.py` which asks for one such line and prints the student's name, the scores in order from lowest to highest, the average and the highest score.

A sample run:

```
Student: Ana,88,92,75
Name: Ana
Scores: [75, 88, 92]
Average: 85.0
Highest: 92
```

You may assume every line has a name and at least one score. Some test values:

Student	Name	Scores	Average	Highest
`Ana,88,92,75`	Ana	`[75, 88, 92]`	85.0	92
`Ben,70,80,90,100`	Ben	`[70, 80, 90, 100]`	85.0	100
`Carla,95`	Carla	`[95]`	95.0	95

Submission

Submit source files (.py) on Canvas by the end of the period. Put your name in a comment at the top of each file. If a classmate helped you, put their name in the comment as well.
